

Planning for Outdoor Space

Currently, Kitsilano Secondary has very limited on-site outdoor space. Renewing the school provides opportunities to reduce the building footprint and create new open space for school and community use.

At this time, the Concept Design Plan shows:

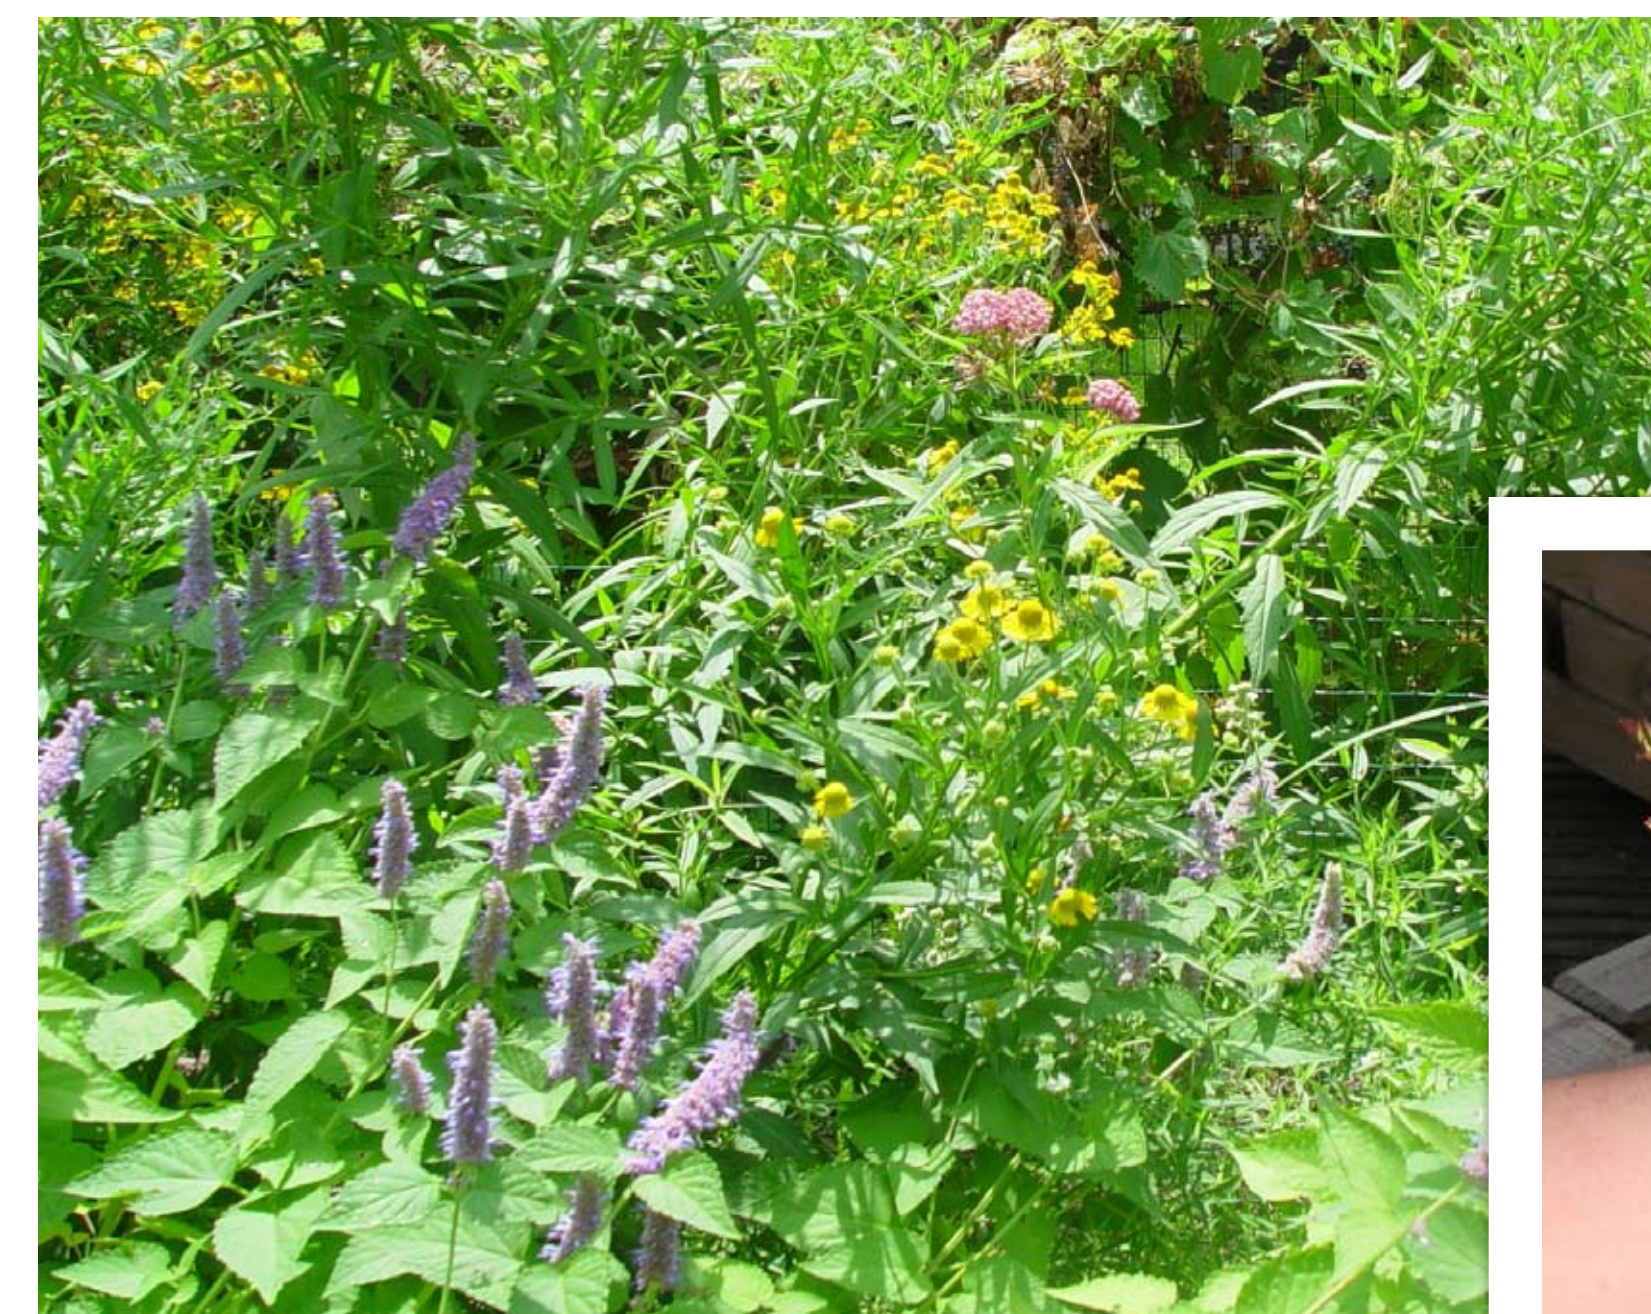

- A small, all-weather artificial turf field for outdoor physical education classes. Outside of school hours, – evenings and weekends – the field would be available for use by the community. The field would replace the existing tennis courts and is viewed as a more useful school amenity than the courts.
- A year-round eco-garden for growing fruits and vegetables as a teaching garden or shared as a community amenity.
- Weather-protected outdoor space facing south, adjacent to the Commons.
- Hard surface courtyard for outdoor circulation and casual play (i.e. basketball).

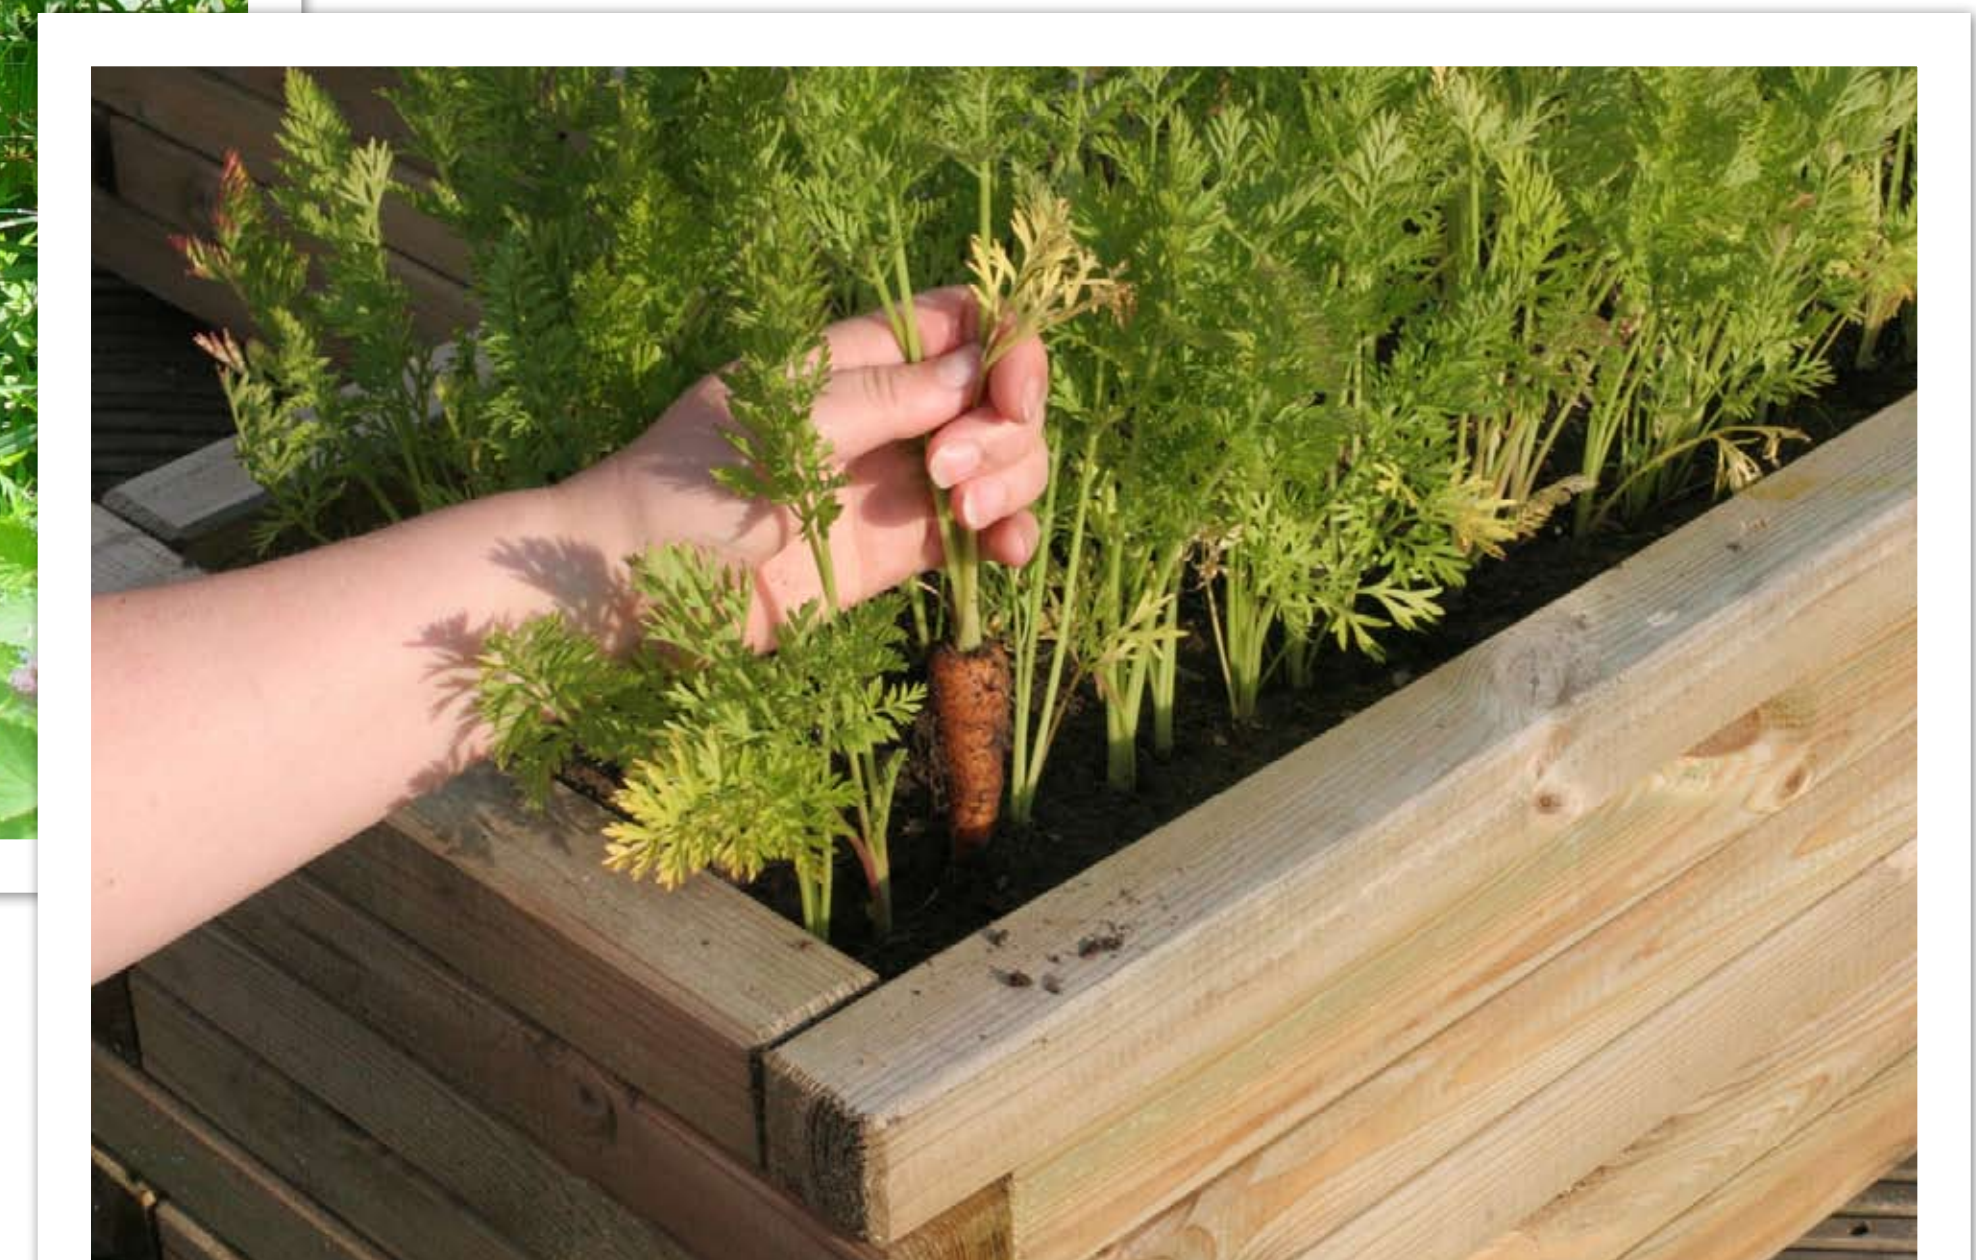

Half size all-weather field for six-a-side and outdoor physical education programs.
